

Project Scope

The aim of our project is to create a Mobile Application that allows estate agents to create new property to be advertised within one system. The estate agent will be able to add images and create a full advert of a property.

Aims:

Main Aims

- The application will be able to use the camera to add photos and save them locally
- The application will be able to add data to a database, and be edited within the application
- The application will be a simple, step by step process to ensure nothing is missed
- The website will pull the data from the database to construct an advert in a set layout

Extra Aims – These are dependant on the progress of the project team and only if we have the time to do so.

- Try and source an API to use the camera to construct Floor Plans and room sizes without the user having to do so manually
- Video functionality

Project Success –

We will class the project as a success if all of the main aims are completed, and we have a fully functioning Application and Website that fulfils the needs we have set out.

Deliverables –

- Poster for presentation at fair (needs Kent logo)
- An abstract which will be at poster fair to describe our project
- Technical report describing the technical problems/outcomes of the project.
- Should be written in style of academic paper.
- Corpus
- A short video of app working (no longer than 5 mins)
- Individual reports
- All Source Code
- All Meeting Minutes
- Use case diagrams & User stories
- Designs
- Testing tables
