

System Requirements

We have decided to create an Android Application. These are the requirements to be able to run the Application and website.

Requirement	Description
Mobile Phone/ Tablet	A Mobile phone or tablet that runs on Android is required to run an Android Application. The device will need a working camera to use this functionality.
Android 8.0 or higher	Our application will not work on systems that are not Android 8.0 or higher.
Internet Connection/Mobile Data	Mobile data will be needed to run the application whilst at a property, in order to upload data to the database. An internet connection will be needed to run the website.
A computer/laptop with access to Internet	A computer will be needed to use the website. Although this could also be used on a mobile phone. It is more likely to be used on a desktop PC, which will require either Google Chrome or other similar Internet programs.
Storage	The device will need 57MB to install the application.
